B Series Security Control Panels

BOSCH

Invented for life

B:more:secure

B Series intrusion control panels

Secure people and property with the B Series from Bosch. These flexible systems fit a range of facility configurations – from retail stores and banks to schools, office buildings and more.

B:more:flexible

Two B Series Control Panel models – B4512 and B5512 – meet the needs of facilities of different sizes. Control individual rooms or up to four distinct areas of your facility. You can disarm your office while your retail area remains secure, protect your bank’s main building while the ATM vestibule remains unarmed, or leave the school gym open while classrooms and labs are monitored.

Scheduled events also allow for the system to be automatically armed and disarmed at pre-determined times or to perform other functions based on an internal clock and calendar.

B:more:at ease

Each B Series control panel works around the clock checking for open windows and doors and performing other services to keep your facility secure. It provides safeguards against burglars, vandalism and more.

And, with event notifications – such as alarms, or warnings from temperature or water level sensors – sent direct to your mobile phone, you’re always kept up to date on the status of your facility even when you’re not there.

B:more:intuitive

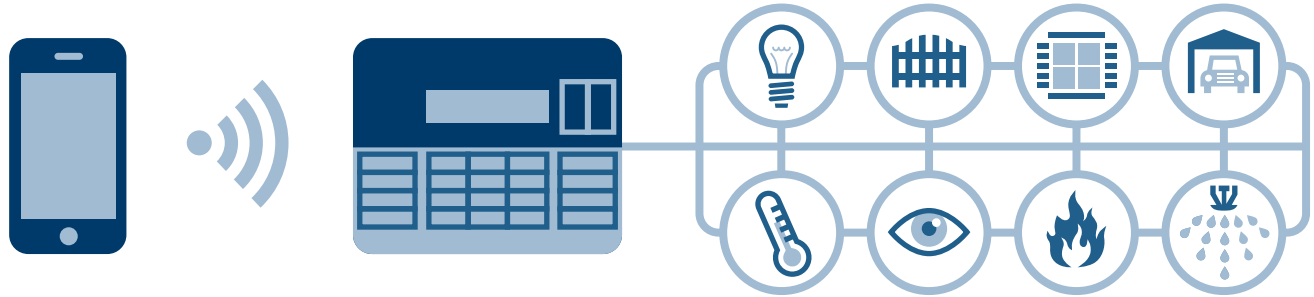

Custom functions tailor the system to your needs and provide simple operation. B Series can be programmed to carry out multiple functions with a single keypad command. This can provide easy arming configurations for events such as overtime work, holidays and after-hour meetings.

Display system text in English or Spanish and automatically switch languages based on the user's preference. This makes it easy to accommodate multilingual applications.

B:more:connected

Use your existing data network or the cellular data network with your B Series Control Panel to send alarm transmissions to the central monitoring station – eliminating the need for a phone line, reducing your costs and increasing security.

With our Remote Security Control app, you can also operate your system from your iPhone, iPad or iPod touch. Arm or disarm the system, check system status and control monitored points or doors using your hand-held device over the Internet or through your local wireless network.

B:more:innovative

The B Series Control Panels are modern Internet appliances for security applications. They support both current and future Internet Protocols – IPv4 and IPv6 – to protect your investment as technology changes. Multiple interfaces for Ethernet and USB connections and simple plug-in communication modules allow for easy adoption of new technologies.

The panels support Domain Name System (DNS) technology for both remote access and central station communication. With DNS, IP communication is simple to set up right from the installer keypad menu or via our remote programming software.

Remote programming with advanced diagnostic capabilities minimizes costs by allowing technicians to service your system or enable or disable certain functions without traveling to your facility. And, remote firmware updates ensure easy maintenance or feature enhancements as they become available.

B:more:in control

With B Series, you can control other building systems, such as HVAC, lighting and more. Turn lights and air conditioning or heat on or off based on building occupancy to conserve energy and reduce costs.

Bosch keypads guide you through system control functions with just a few simple steps. The simple user interface helps reduce errors and minimize false alarms. B Series can also be armed and disarmed with a wireless keyfob – making access easy for employees.

A range of available components include:

Keypads

Choose a two-line LCD keypad or the ATM-style LCD keypad with eight command keys that simplify the user interface and system navigation. With up to 32 characters of programmable text, the system can be customized to provide the most complete information for response to critical events.

Intrusion Detectors

A full line of intrusion detectors include Blue Line Gen2 with excellent catch performance and false alarm immunity.

Wireless Transmitters

RADION component options feature superior range, reliability, flexibility and battery life to provide maximum security with minimal inconvenience and cost.

B:more:reliable

Bosch employs the highest standards to ensure quality and performance. Each B Series panel has also passed rigorous testing by Underwriters Laboratory (UL), an independent product safety testing and certification organization.

B:more:confident

Invest in a B Series panel and get more for your business or organization. To learn more, visit www.boschsecurity.us to locate a certified dealer in your area.

A Tradition of Quality and Innovation

For 125 years, the Bosch name has stood for quality and reliability. Bosch is the global supplier of choice for innovative technology, backed by the highest standards for service and support.

Bosch Security Systems proudly offers a wide range of security, safety, communications and sound solutions that are relied upon every day in applications around the world, from government facilities and public venues to businesses, schools and homes.
